

## Large Scale Disconnection Scheme for Nottingham NET Phase II Demolition Project

Customer: Vinci Construction Ltd.

DNO: Western Power Distribution

Location: Nottingham , Nottinghamshire, UK

During this project we have worked with Vinci construction to provide a coordinated disconnection of all existing services to a large number of properties along the proposed route of the new Tram Line in Nottingham. The NET Phase II has requested for a total of 72 properties and businesses to be disconnected from all the utilities prior to complete demolition.

The disconnection process has lasted for nearly 11 months and consisted of two separate phases.

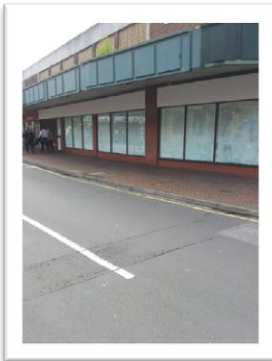

We have worked with local distribution companies, local and county councils as well as meter and supply operators. The support we have provided the customer allowed the demolition process to commence as planned.
